Homework 2

Chun-Hsian Huang (黃駿賢)

Dept. of Computer Science and Information Engineering
National Taitung University

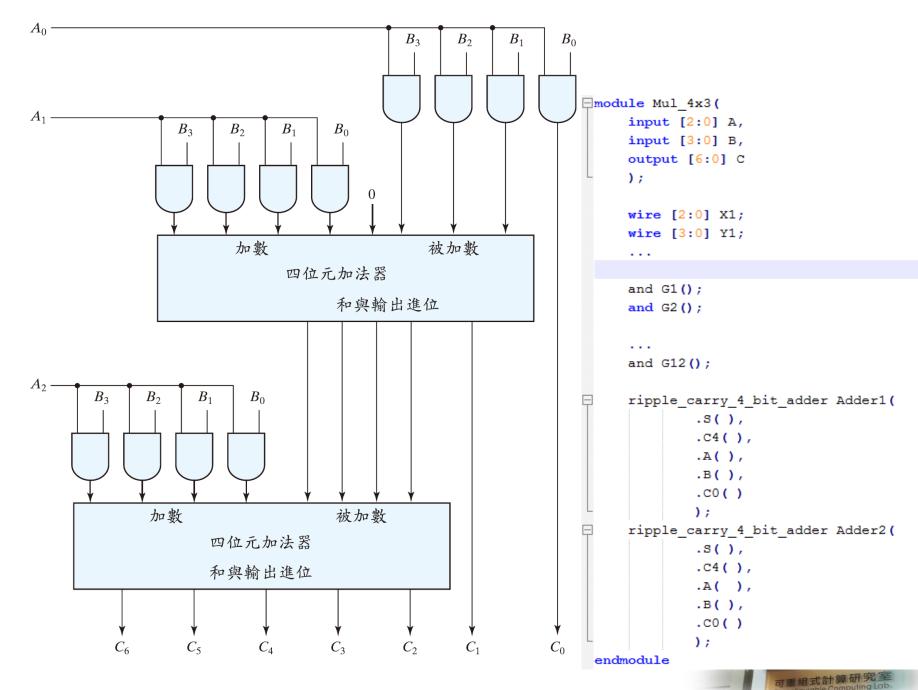

題目

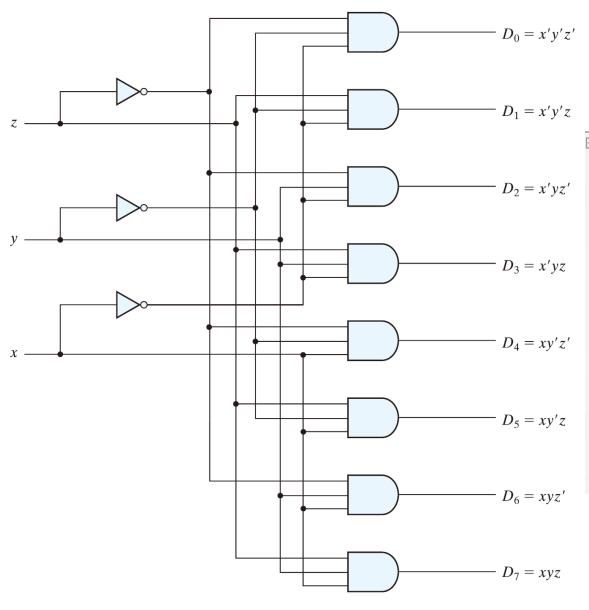

- 1. 參閱圖4-16,實現一個四位元乘以三位元之二進位 乘法器,並撰寫其testbench檔(含至少三組測試資 料)
- 2. 參閱圖4-18,實現一個三對八線解碼器,並撰寫其 testbench檔(含至少三組測試資料)
- 3. 參閱圖4-21,利用三對八線解碼器來實現一個全加 法器,並撰寫其testbench檔(含至少三組測試資料)
- 4. 現有一個函數 $F(A, B, C, D) = \Sigma m(0, 2, 5, 8, 10, 14)$,請參閱圖4-28,利用多工器來實現這個四輸入的函數,並撰寫其testbench檔(含至少三組測試資料)

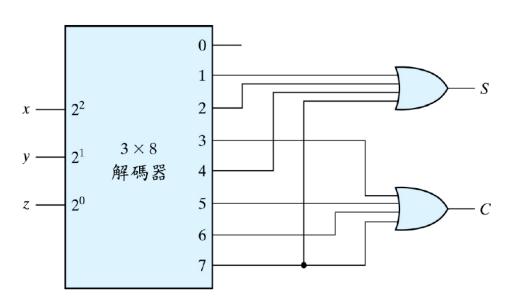

▶圖 4-16 四位元乘三位元之二進位乘法器

```
module Decoder_3x8(
     input x, y, z;
     output [7:0] D
     );
     wire [2:0] D0_wire, D1_wire,....,
     and G0();
     and G1();
     and G7();
     not G8();
     not G10();
 endmodule
```

▶表 4-4 全加法器

x	y	Z	С	S
0	0	0	0	0
0	0	1	0	1
0	1	0	0	1
0	1	1	1	0
1	0	0	0	1
1	0	1	1	0
1	1	0	1	0
1	1	1	1	1
			I	

$$S(x,y,x) = \Sigma m (1,2,4,7)$$

 $C(x,y,z) = \Sigma m (3,5,6,7)$

```
□module Full adder(
     input x, y, z;
     output S, C
     wire [7:0] D wire;
     Decoder 3x8 uut (
          .x(),
          .y(),
         .z(),
          .D()
 endmodule
```

範例: $F(A, B, C, D) = \Sigma(1, 3, 4, 11, 12, 13, 14, 15)$

A	В	C	D	F	
0	0	0	0 1	0 1	F = D
0	0	1 1	0 1	0 1	F = D
0	1 1	0 0	0 1	1 0	F = D'
0	1 1	1 1	0 1	0	F = 0
1	0	0	0 1	0	F = 0
1 1	0 0	1 1	0 1	0 1	F = D
1 1	1 1	0 0	0 1	1 1	F = 1
1 1	1 1	1 1	0 1	1 1	F = 1

題目: $F(A, B, C, D) = \Sigma m(0, 2, 5, 8, 10, 14)$

作業繳交

- 各題電路和其testbench檔,以及對應的waveform圖(每題分別用一個資料夾存放,共四個資料夾HW2_1、HW2_2、HW2_3和HW2_4,最後壓縮為HW2.rar上傳到網路學園)
 - 1. $Mul_4x3.v \cdot tb_Mul_4x3 \neq Mul_4x3.jpg$
 - 2. Decoder_3x8.v、tb_Decoder_3x8和Decoder_3x8.jpg
 - 3. Full_adder.v、tb_ Full_adder.v和Full_adder.jpg
 - 4. mux_8x1_beh.v \ tb_mux_8x1_beh.v ≠ mux_8x1_beh.jpg
